

Thesis Supervisor Selection Process
[B.Tech - M.Tech (Cat-B) Dual Degree Students]

During the middle of the 6th semester of B.Tech/BS program in any department (other than Civil Engineering), a student interested in change of program to B.Tech – M.Tech Dual Degree (Category-B, with M.Tech in Civil Engineering), should decide on his/her intended area of specialization for M.Tech and consult with CE faculty members in that specialization. Based on such consultations, he/she should identify a faculty member agreeing to serve as his/her thesis supervisor for the M. Tech thesis.

A student with an identified supervisor can pre-register for the 7th semester courses in consultation and with the consent of the prospective thesis supervisor.

The student should also respond to the formal call for change of program to Cat-B dual degree made by the DOAA office in that (i.e., his/her 6th) semester by filling up the required form and submitting it to the DUGC convener of his/her department. List of students allowed change of program to Cat-B Dual Degree will be announced by the DOAA office before the beginning of the 7th semester.

Once formally admitted into the Cat-B Dual Degree program in Civil Engineering, the student must send an email to CE DUGC Convener (with a copy to the thesis supervisor) formally announcing his/her choice of thesis supervisor for the M. Tech part of the program. The students can further fine tune their course choices during the add-drop period at the beginning of the 7th semester in consultation and with the consent of the thesis supervisor. Students will continue to pre-register and add-drop courses in their 8th, 9th and 10th semesters in consultation and with the consent of the thesis supervisor.

Civil Engineering department does not allow students to opt for Cat-B dual degree program anytime before or after the 7th semester.
